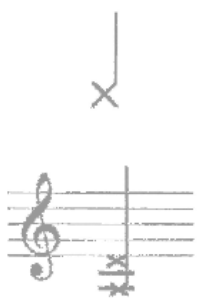
Thomas Hummel

cocoon

for string quartet
and computer controlled live-electronics
(1993)

explanations strings



play with damped strings. Damp with fingers of the left hand. The string is indicated by the pitch of the note:

as an example: play on string g and d

if the pitch does not correspond a string, it means damping fingerings on an appropriate string (e.g. re in this case)

play on the bridge (normally as transition ord--sp--bridge)

short, long fermata

cl	col legno
clb	col legno battuto
get	gettato

exaggerated bow pressure

play with fingernail
(used with pizzicato, scratching along the string)

hit with fingers on the corpus

bow parallely to the strings,
damped strings. Also used with fingernail
(then scratch with fingernail parallely
to the strings

same as above, tremolo up and down

The score consists of an instrumental part, a computer synchronization line (below) and a part of the live-electronic processes at the bottom. This representation is not a complete description of the live-electronic processes, but serves for the rehearsal of the sound diffusion part. As all instruments are transformed individually, the live-electronic part is divided up by the four instruments.

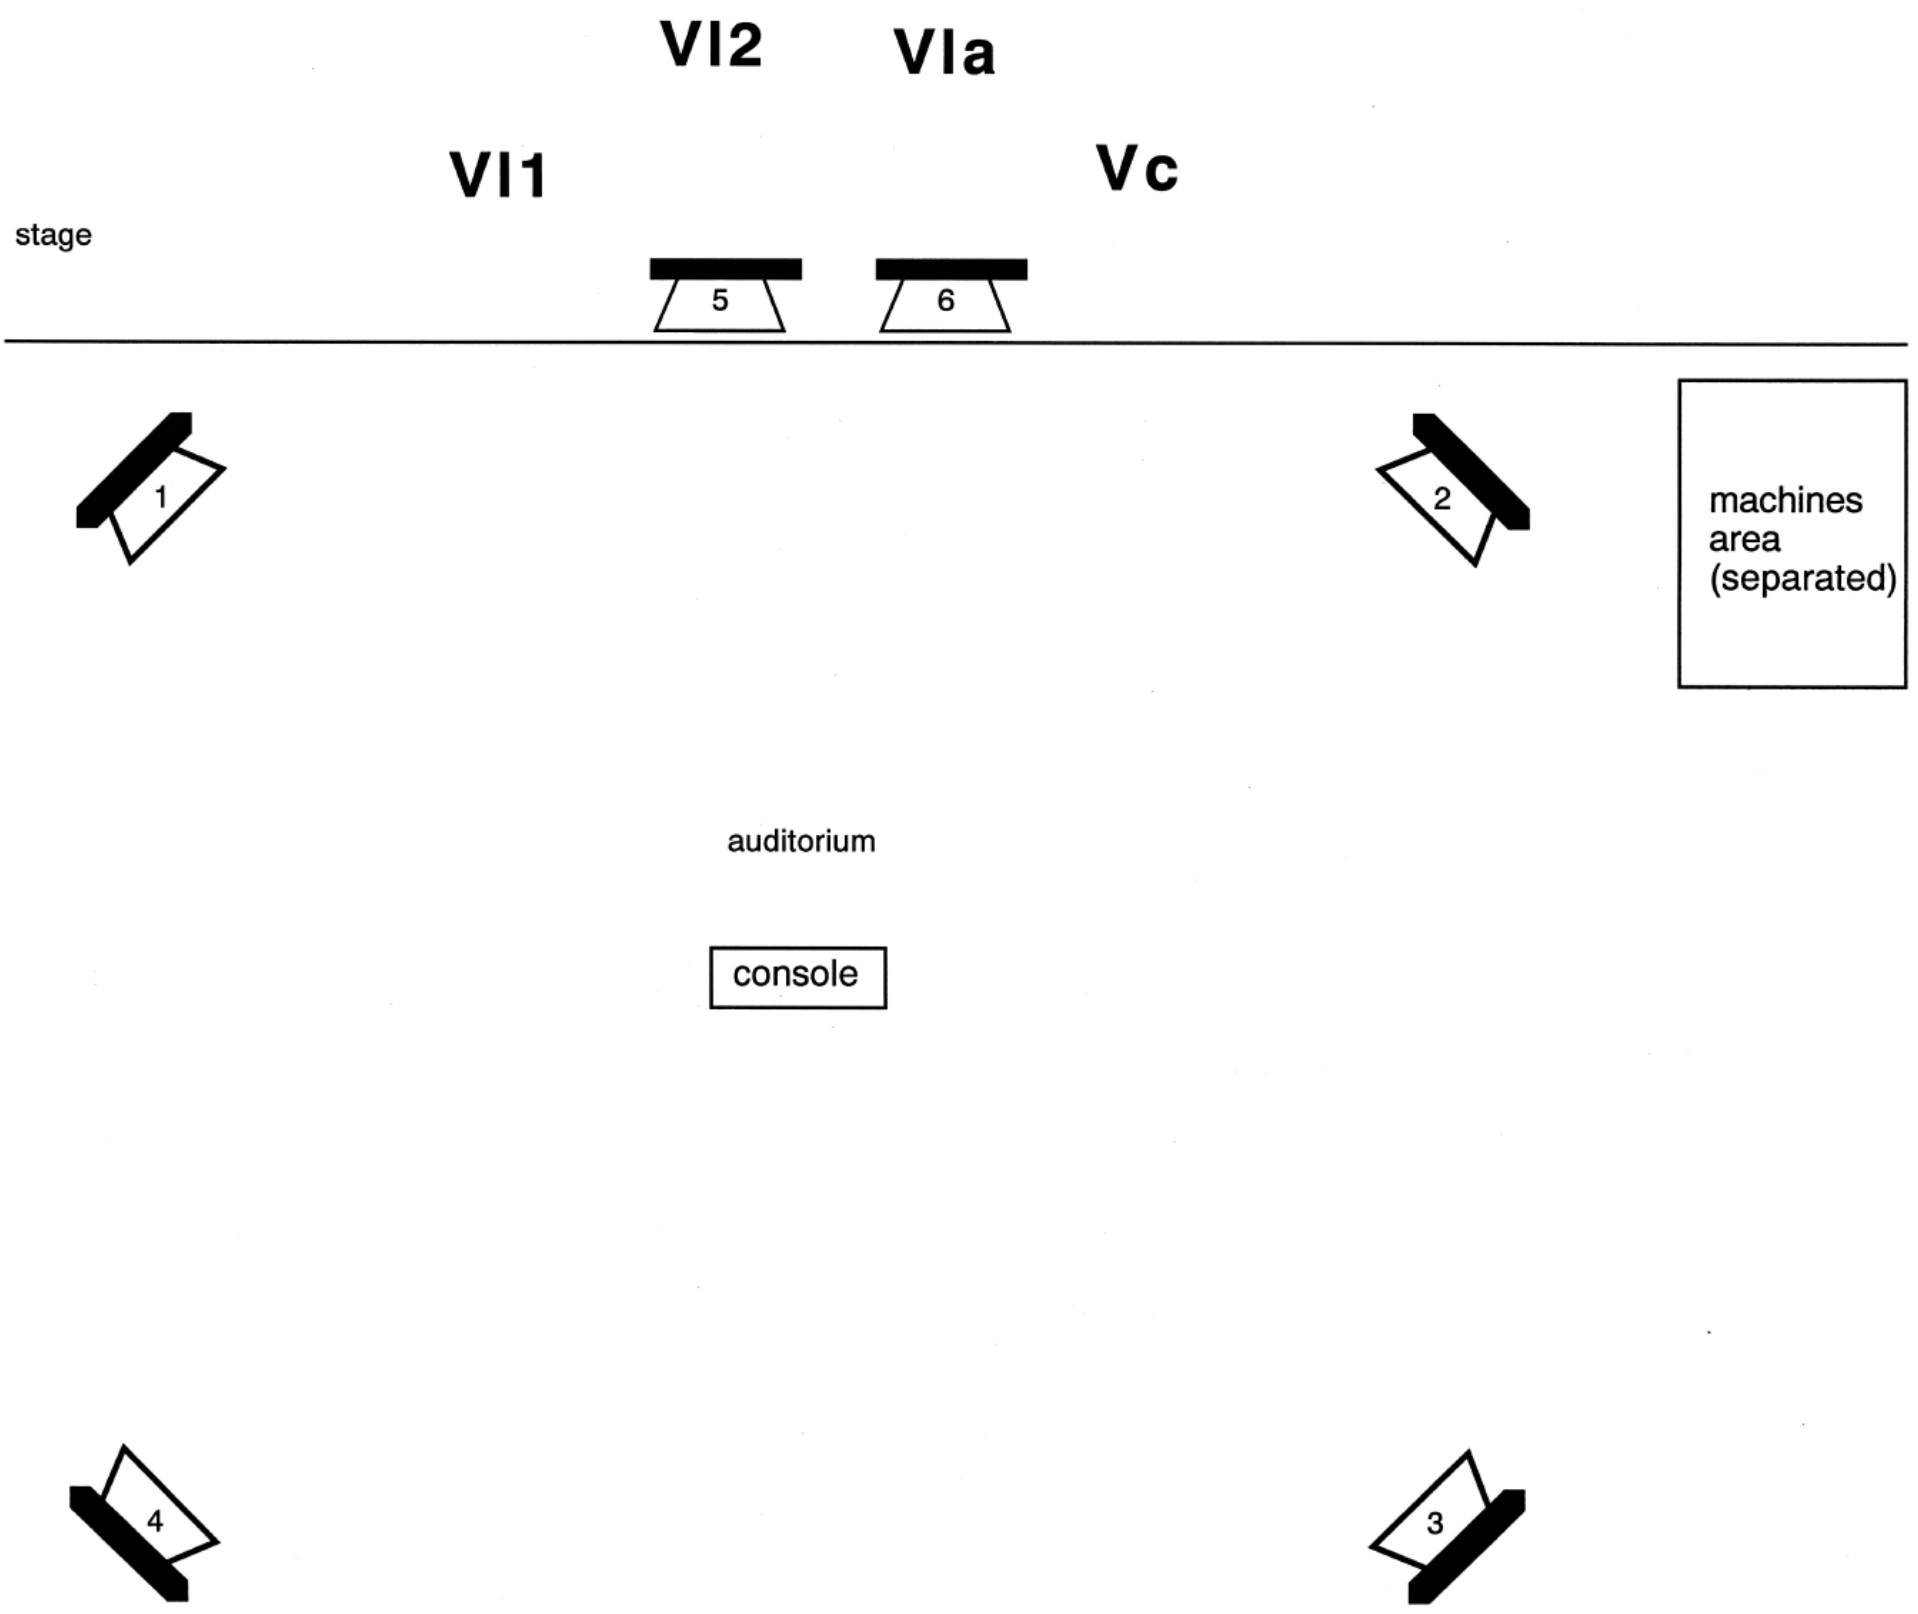
1.4. disposition



The following pages show some (not all!) symbolic audio circuits of the piece. An audio circuit is correlated to a section and a pitch coding the circuit. The pitch is noted together with the circuit (c4 is middle c) and can be found in th score in the staff of the transformation code.

The list of ciruits is not complete and does not show every detail of the circuits. Nevertheless it can be used as a sort of overview of occuring patches.

The audio flow is bottom up, so the instruments micro inputs are notated low, the loudspeakers high.

0loud 1	0. loudspeaker (rear left) with amplitude 1 (= 0dB)
1loud 1	1. loudspeaker (rear left) with amplitude 1 (= 0dB)
2loud 1	2. loudspeaker (rear left) with amplitude 1 (= 0dB)
3loud 1	3. loudspeaker (rear left) with amplitude 1 (= 0dB)
fsh	frequency shifter, left input = signal, right input = frequency shift
